

Workshop Overview

Under increasing pressure to evolve, organisations and managers are faced with an increasing number of risks and potential threats. Delegates will be guided through the process of risk management, providing them with a practical approach to analysing risks, qualitative and quantitative measurements and developing control mechanisms.

Benefits

Attendees will learn the best practice approach to risk management and understand the concepts behind this subject. They will develop techniques to identify and investigate potential risks around projects and analyse and prioritise those risks using both quantitative and qualitative tools. They will understand mitigation strategies and techniques in order to meet expectations and criteria set out by stakeholders or sponsors and be able to create contingency plans should risks occur.

Outcomes & Content

- | | |
|--|--|
| ✓ Overview of risk management | ✓ Evaluation of risk (internal and external) |
| ✓ What exactly is risk? | ✓ Stakeholders tolerances |
| ✓ Processes involved in risk management | ✓ Organisational, process, personal |
| ✓ Identification of organisational risk | ✓ Risk response |
| ✓ Risk profiling | ✓ Risk contingency planning |
| ✓ Quantitative and qualitative risk assessment | ✓ Reduction of vulnerability |

Who should attend ?

All those staff members who are involved in the identification, analysis and management of risk. This course will also prove invaluable to those managing projects.
